### Chris Rehl, Marketing Director, CIMTEK

The recent economic situation has forced companies to do more with less over the last 18 months.

CIMTEK has realized double digit revenue growth over the last year by enabling electronics manufacturers to drive their businesses forward through more innovation and delivering more successful New Product Introductions in this difficult economic cycle.

Chris Rehl, Marketing Director, CIMTEK

The next eighteen months present unprecedented new opportunities for those companies who maximize focus on their operational efficiencies by focusing on their internal core competencies and partnering with organizations like CIMTEK for expertise in solving the manufacturer's dilemma; how to deliver products faster, better and cheaper without sacrificing quality.

CIMTEK quality lifecycle management solutions deliver actionable insight throughout the entire product lifecycle and take advantage of unrealized opportunity by enhancing our customers' ability to:

- Fuel innovation by shortening New Product Introduction cycles,
- Reduce operational costs and increase efficiencies, and
- Rapidly deliver products with high quality.

We work closely with multinational providers of electronics devices to reduce supply chain risk, accelerate time to market and increase financial performance by improving manufacturing operations predictability.
